

Vaccine Talking Points

16 years and under must be accompanied by an adult to their vaccination, whether it is scheduled or walk in.

- While younger people are at a lower risk of the more serious side effects of COVID-19, they play an important role in keeping our more vulnerable friends and family safe.
- The more people who are vaccinated, the less the virus can spread – slowing the further mutation of the virus and reducing risk for all of us.
- While it is rare, children and teens can experience serious illness, and even death, from COVID-19,.
- If you have questions about vaccination, for you or your child, please reach out to your primary care provider. They will talk over your specific healthcare needs and whether vaccination is the right choice for you.
- There will always be members of our community who cannot be vaccinated due to allergies or illness, and people whose immune systems can not build up the same response after vaccination to protect them against COVID-19 – it is for these people that we should all consider getting vaccinated.
